Elizabeth - thanks for the updates and thanks for taking the time yesterday to explain all the new developments with Hawaii's permits. You've made quite an accomplishment getting HDOH to change the way they write water quality based permit limits.

Subject: HI permits of interest

Hi Ken,

So, here's the status of the permits you requested:

Honouliuli – issued **final** on 2/28/14; minor modification 4/28/14 to address typos (see attached).

- Chlordane and dieldrin – no effluent limits in previous permit; current permit includes effluent limits based on WQS x dilution factor.
- Compliance schedule included with interim limits for new enterococcus limits.
- Includes performance-based limit for ammonia.

Sand Island – **DRAFT**, not yet public-noticed, and may need to be revised (see attached).

- Chlordane and dieldrin – draft permit includes less stringent limits than those included in previous permit.
- Compliance schedule included with interim limit for new monthly average enterococcus limit (daily maximum kept the same as in previous permit).
- Includes performance-based limit for ammonia.

Hilo – **public noticed** on 1/9/14 (see attached).

- Compliance schedule with interim limits for new criteria end-of-pipe limits (no dilution) for nitrate + nitrite.
- Also, includes new limits for cyanide and enterococcus.

Let me know if you have any more questions. I'm here to help!

-Elizabeth
